Anupreeta Nikam

BI Engineer | SQL · Data Modeling · GenAI

nikamanupreeta@gmail.com | linkedin.com/in/anupreeta-nikam24 | github.com/anupreeta24

Education

Northeastern University **Aug 2026**
Master of Science in Data Analytics Engineering *Boston, MA*
- Coursework: Data Warehousing, Data Storytelling, Natural Language Processing, Generative AI

Pune University **Jun 2024**
Bachelor of Engineering in Information Technology *Pune, India*
- Coursework: Data Science, Big Data Analytics, Business Analytics & Intelligence, Information & Storage Retrieval

Skills

Languages & Analysis: SQL, Python, R, Pandas, NumPy, Scikit-learn

BI & Visualization: Tableau, Power BI (DAX), Excel (Pivot Tables, Lookups, VBA), Streamlit, Matplotlib, Seaborn, Plotly

Data Engineering & Cloud : Snowflake, dbt, ETL/ELT, Talend, AWS, GCP, PySpark, PostgreSQL, Dimensional Modeling

AI & Analysis: LLMs, Prompt Engineering, LangChain, LangGraph, Exploratory Data Analysis, Forecasting, A/B Testing,

Work Experience

MyEdMaster **Jan 2026 – Apr 2026**
Data Science Intern *Boston, MA*
- Built **LLM extraction pipeline** using OpenAI API converting unstructured intake text into typed fields, removing manual data entry
- Shipped **7 FastAPI endpoints** on GCP ingesting **30+ variables** into one analysis-ready dataset
- Ensured **data accuracy** by catching schema regressions pre-deployment with 3 integration test suites
- Eliminated **silent data loss** during outages by queuing failed writes and replaying them on recovery

MMCOE **Sep 2023 – Mar 2024**
Research Assistant *Pune, India*
- Analyzed **2M+ e-learning platform logs** for 12K students using Pandas and SQL to study engagement and academic performance
- Built **Tableau dashboards** tracking weekly engagement and performance across 6 departments
- Supported faculty research through literature review, data collection, and analysis using Python and Excel

VASP Solutions **Feb 2023 – Jun 2023**
Data Analyst Intern *Pune, India*
- Delivered Power BI dashboards for non-technical stakeholders, translating requirements into KPI definitions and refresh logic
- Cut a **multi-hour weekly reporting cycle to under one hour** through scheduled Excel-VBA automation
- Prevented downstream reporting errors by flagging **duplicate, null, and out-of-range** values at ingestion
- Documented **source-to-dashboard lineage** and column definitions, reducing repeat questions from reporting teams

Projects

Omnichannel Retail Analytics & Customer Segmentation **SQL, Python, Power BI (DAX)**
- Built SQL warehouse over **250K+ monthly transactions** unifying online and in-store customer tables
- Designed Power BI star schema with **DAX measures** tracking CAC, LTV, margin, and repeat rate
- Found **online CAC 28% below retail**, sizing a **$200K quarterly** budget reallocation opportunity
- Implemented **RFM segmentation** and SQL alerts flagging overstock, stockouts, and high-margin clusters

Customer Propensity Model & Churn Risk Dashboard **Python, Scikit-learn, Tableau**
- Trained and compared **8 classifiers** on 500K+ customer records using stratified five-fold cross-validation
- Engineered **25+ behavioral, support, and billing features**, applying SHAP to isolate churn drivers
- Built a **Tableau dashboard** segmenting 120K+ high-risk customers by risk band, tenure, and product line
- Simulated weekly retraining with **drift monitoring**, holding 85%+ precision across rolling windows
